MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

JULY 1937

TEMPERATURE

Along the east coast of Vancouver Island and the mainland opposite, temperatures averaged two or three degrees above normal, as they did also in the Similkameen, Okanagan, and Thompson valleys. On the outer coast of Vancouver Island, in the Middle and Upper Fraser valleys, and in the West Kootenay temperatures were about one degree above normal. Along the northern stretch of the coast and in the Queen Charlotte Islands temperatures averaged from one degree above to two degrees below normal. In the Yukon Territory temperatures were three or more degrees below normal.

In Alberta in the foothill region the excess over normal temperature was two or three degrees. In the region of the Athabaska and Peace Rivers temperatures varied from normal to two degrees above normal. In the extreme southeastern portion of Alberta there was an excess of eight degrees, while further north along the Alberta-Saskatchewan boundary there were excesses of three to eight degrees.

Over most of the wheat region of Saskatchewan the excess over normal temperature was four to nine degrees, although along the extreme northwestern margin of agriculture the excess was only one or two degrees.

In southern Manitoba the excess was generally two or three degrees but west of Lake Manitoba the excess was five to eight degrees. In the extreme northern portion of Manitoba between the Churchill and Nelson Rivers the excess was six to eight degrees.

In Ontario along the northern coast of Lake Superior temperatures were mostly normal to two or three degrees below normal but in the region of the Lake of the Woods there were excesses of two to four degrees. From the Georgian Bay northward to James Bay temperatures averaged from two degrees below normal to one degree above. In the region of the Lower Lakes and the Ottawa River temperatures were mostly two degrees above normal, except along the shore of Lake Erie where they were normal or one degree above normal, and some portions of the Georgian Bay and Manitoulin Island districts where excesses of four or five degrees were reported.

In Quebec the general excess over normal temperature was two or three degrees but there were excesses of three to five degrees in the northern highlands and along the northern boundary of Maine.

In New Brunswick the excess over normal temperature was two degrees along the Maine-New Brunswick boundary and along the eastern coastline. From the Bay of Fundy northward into the interior there were excesses of three or four degrees. In Nova Scotia and Prince Edward Island there was a general excess of two or three degrees.

On the islands of the Gulf of the St. Lawrence, Anticosti Island, the Magdalen Islands, and St. Paul Island there was an excess of five to seven degrees.

In eastern Newfoundland the excess over normal temperature was three or four degrees but along the west coast about one degree. In Hudson Strait temperatures averaged about normal but three degrees below at Resolution Island. In the Mackenzie valley and along the Arctic coast to Chesterfield Inlet on Hudson Bay temperatures were one to two degrees below normal.

PRECIPITATION

In British Columbia along the Lower Fraser valley and over the greater part of Vancouver Island the rainfall was deficient by 50% or more. On the southern tip of Vancouver Island the month was practically rainless. Along the northern extension of the coast the deficiency was 10 to 20%. In the Okanagan valley and the West Kootenay there were excesses of 10 to 70% but there was a deficiency in the East Kootenay. From the headwaters of the Fraser River northward to the headwaters of the Peace River there was a deficiency of 20 to 70%. There appears, however, to have been an excess of 50% or more over the interior plateau.

In the foothill valleys of Alberta and in the regions from the North Saskatchewan River to the Athabaska River there were excesses ranging from 50 to 200%. In the region of the Bow and South Saskatchewan Rivers there were deficiencies of 40 to 80% and moderate deficiencies along the Alberta-Saskatchewan boundary between the north and south branches of the Saskatchewan River.

In Saskatchewan the region of excess over normal rainfall extended from the Churchill River southward into the region between the north and south branches of the Saskatchewan River where there were excesses of 10 to 100% with extremely irregular local variations. Along the South Saskatchewan from the Elbow to Saskatoon and eastward to the Qu'Appelle and Assiniboine Rivers there were deficiencies of 15 to 80%. Here also the incidence of rainfall was highly irregular. Locally, south of Moose Jaw towards the International Boundary, some stations reported an excess.

In Manitoba south of the Assiniboine and along the Red River there were locally heavy rainfalls, stations reporting excesses of 10 to 250%. Northward of this region and generally over the Great Lakes of Manitoba there were deficiencies of 25 to 80%.

Although there were deficiencies in the immediate vicinity of the Lake of the Woods eastward along the Rainy River to Lake Superior and northward from the north shore of Lake Huron to James Bay, there was an excess over normal rainfall of 20 to 200% and averaging about 55%. In the region of the Lower Lakes as far as the Lower Ottawa River rainfall was generally deficient by about 25%. Around Lake St. Clair and locally in the Niagara Peninsula rather large excesses were reported.

In Quebec rainfall was generally 15 to 40% below normal but there was a narrow region on both sides of the Middle St. Lawrence where excesses ranged from 5 to 50%.

In northern New Brunswick there was a deficiency of about 35%; of about 50% along the middle portion of the St. John valley; and of 75 to 90% along the north shore of the Bay of Fundy. In Nova Scotia rainfall appears to have been about normal along the interior ridge but 50 to 80% below normal in the Annapolis valley and around the Basin of Minas. On the outer coast from Halifax to Cape Breton Island there was a deficiency of 60 to 90%.

On the islands of the Gulf of St. Lawrence and in Newfoundland there were deficiencies of 40 to 60%.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month.
